# ACS-200

## Bio-Active Colloidal Silver Oral spray, Nasal Spray, and Gel

### WHAT IT IS:

- A powerful, natural antibiotic

### WHY YOU NEED IT:

- Proven to kill on contact: viruses, bacteria, fungi, yeast and Lyme
- Kills the “worst of the worst” pathogens, including MRSA staph, Pseudomonas
- The strongest colloidal silver product on the market
- Has a 99.9999% kill rate in less than three minutes
- Important support for patients with active infections
- Targets patients wanting to prevent disease
- Safe and non-toxic at recommended doses
- Good for internal and external uses

### HOW IT HELPS:

When comparing colloidal silver products, the most important measures for evaluation are safety and efficacy...no matter the hype or the claims.

In independent studies, ACS-200 safely kills more types of “bugs” faster and more completely than any other colloidal silver product available today.

For thousands of years, silver has been used by healers and scientists for its natural antibiotic effects. Silver coins used to be tossed into water barrels to keep the water potable. Eventually, silver was finely ground and suspended in water (colloidal) and used as a medical therapy.

However, for silver to really work and to be safe, simply mixing powdered silver and water is not enough.

It is no secret that the bacteria are getting stronger and traditional antibiotics are working less and less. When patients get sick today, they are falling faster and harder, with a prolonged recovery.

Even the “worst of the worst” bacteria have no protection against ACS-200. This product should be used early and often when any significant infection strikes you or someone you know.

For acute infections: Take up to 25 sprays orally immediately and then repeat this dose up to seven times daily until the infection resolves.

For chronic infections: Take up to 10 sprays three to five times daily. When symptoms start to improve, reduce the dose and frequency by half.

For respiratory infections, use one teaspoon of ACS-200 in a nebulizer every three to four hours until well.

For nasal infections, apply ACS-200 gel to a cotton swab and insert the gel just inside the nostril. Compress the nostril externally to spread the gel throughout the lower nose. Repeat two to three times daily.

For sinus infections, use ACS-200 nasal spray, 4 – 5 sprays in each nostril, four to six times daily.

For all day protection (during meetings, travel, testing, school, sick contacts), five to ten sprays by mouth three times daily can help boost critical immune protection when you cannot afford to be sick or if you are in contact (close quarters) with a person who has a contagious infection.

To support natural, healthy skin, generously apply ACS-200 gel onto the affected area (wounds, burns, rashes, pustules, pimples or rosacea) two to three times daily immediately after washing.

ACS-200 is very safe when used as recommended

ACS-200 products should be in your travel bag, purse, desk drawer, medicine cabinet and first aid kit.

There is one of each in mine.

Be Well,

Michael Hirt, MD
